RE: Medley Farm Site

Dear Mr. Bornholm:

On behalf of the Medley Farm Site Steering Committee, I am writing to confirm our telephone conference earlier today regarding the Phase II Remedial Investigation and recent data from monitoring well BW105.

As we discussed, BW105 is a 140 foot deep bedrock well with 50 feet of open corehole extending from approximately 90 to 140 feet. Data received this week indicates that some contamination is present in BW105. Pursuant to the Phase II RI/FS Workplan, we all agreed that an additional bedrock well will be installed in the vicinity of BW105 in order to characterize the vertical extent of contamination. This additional well will be 210 feet deep with 20 feet of open corehole extending from approximately 190 to 210 feet, unless it is found that greater depth is necessary in order to access a water-producing zone. In order to expedite the installation of the additional well and stay within the current schedule for completing the Phase II RI activities, the first 190 feet of the well will be drilled with an air hammer. The remaining 20 feet will be cored to produce a 4 inch open corehole. Samples from this well will be analyzed for VOCs following CLP protocols. You agreed that this procedure is appropriate and acceptable.

In addition, we all agreed that the bottom 30 feet of the existing BW105 well will be filled with grout, leaving 20 feet of corehole available for future sampling.

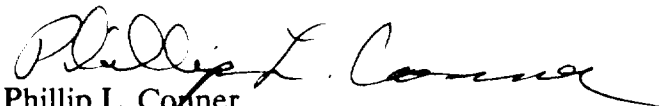

Finally, we asked what your intentions are with regard to interfacing with the South Carolina Department of Health and Environmental Control (DHEC) on the above matters. You stated that you would talk with DHEC and advise us of any concerns.

We appreciate your availability during our telephone conference. Please contact me if you have any questions.

Sincerely,

OGLETREE, DEAKINS, NASH,
SMOAK AND STEWART
